PURPOSE Data structure is a particular way of storing and organizing information in a computer so that it can be better processed. This course introduces different kind of data structures like stack, queue, linked list, tree and graph suitable for different kinds of applications. Specific data structures are most important for many efficient algorithms.

| IN | INSTRUCTIONAL OBJECTIVES                                                         |     | STUDENT |          |    |  |  |
|----|----------------------------------------------------------------------------------|-----|---------|----------|----|--|--|
|    |                                                                                  | OU' | rc(     | <u>M</u> | ES |  |  |
| At | the end of the course, student will be able to                                   |     |         |          |    |  |  |
| 1. | Understand analysis of algorithm and its time complexity                         | a   | b       |          |    |  |  |
| 2. | Be familiar with and implement the Linked list data structure                    | a   | b       | c        |    |  |  |
| 3. | Be familiar with and implement the Stack and Queue data structure                | a   | b       | c        |    |  |  |
| 4. | Have a comprehensive knowledge of Trees and their implementations                | a   | b       | c        |    |  |  |
| 5. | Learn advanced data structures like Graphs and their implementation, hash tables | a   | b       | С        |    |  |  |
|    | and Hashing methods                                                              |     |         |          |    |  |  |
