B.Tech. DEGREE EXAMINATION, NOVEMBER 2018

15CS302J - OPERATING SYSTEMS (For the candidates admitted during the academic year 2015-2016 to 2017-2018)

(i)

Part - A should be answered in OMR sheet within first 45 minutes and OMR sheet should be handed over to hall invigilator at the end of 45th minute.
Part - B and Part - C should be answered in answer booklet. (ii)

 $PART - A (20 \times 1 = 20 Marks)$ Answer ALL Questions

contains the address of an instruction to be fetched.

(A) Program counter

(B) Stack pointer (D) Instruction register

(C) Index register

Time: Three Hours

(B) Secondary memory

Non-Volatile memory is also referred as _
 (A) Primary memory
 (C) Tertiary memory

(D) Off-line memory

3. The central idea behind the simple batch processing scheme is the use of a piece of software known as

(A) Interrupts

(B) Timer (D) Monitor

(C) Memory protection

4. Which is responsible for maintaining all the important abstraction of the operating system? (B) System libraries

(A) Kernel

(D) Daemonus

(C) System utilities

program that switches the processor from one process to another.

(A) Scheduler (R) Discrete

(D) Semaphore

6. When the OS creates a process at the explicit request of other process, the action is referred

(A) Process creation

(B) Process termination

(C) Process spawning

(D) Process swapping

consists of the contents of processor register.

(A) Processor state information

(B) Processor block information

(D) Processor control information (C) Processor status information

8. The event for which a state 'thread is blocked' occurs when.

(A) Thread moves to ready queue
(C) A new thread is provided

(B) Thread completes
(D) Thread remains blocked

29NF3-7/15CS302J

Max. Marks: 100

29NF3-7/15CS302J

| The non binary semaphore is often refer | rred to as |
|---|--|
| (A) Strong semaphore | (B) General semaphore |
| (C) Weak semaphore | (D) Mutex |
| Which module gives control of the CPU | I to the process selected by the short-term scheduler? |
| (A) Scheduler | (B) Monitor |
| (A) Scheduler | (D) Interrupt |
| (C) Dispatcher | |
| 1. A is one in which there is alteas | t one sequence of resource allocation to processer that |
| does not result in deadlock. | (D) XI - C1-1- |
| (A) Safe state | (B) Unsafe state |
| (C) Resume state | (D) Suspended state |
| 12. A semaphore may only take on | |
| (A) Binary | (B) Strong |
| | (D) Hexadecimal |
| (C) Weak | -1 - B1 & -19 & 1 |
| 13. The operating system maintains | for each process. |
| (A) Page table | (B) Page history |
| (C) Page record | (D) Page block |
| . During growing to | The state that we great |
| 14 chooses the block that is closes | t in size to the request. |
| (A) Next fit | (B) First fit |
| (C) Order fit | (D) Best fit |
| 15 words size are available in men | |
| 15. Words size are available in men | (B) 2 ^k |
| (A) 2^{k+1} | (B) 2^k (D) $2^{k/1}$ |
| (6) 2 | and the same |
| 16 A chooses only among the res | sident pages of the process that generated the page fault |
| in selecting a page to replace. | |
| (A) Global replacement policy | (B) Local replacement policy |
| (C) Logical replacement policy | (D) Absolute replacement policy |
| | |
| 17. On a movable head system, the time | e it takes to position the head at the track is known as |
| (A) Access time | (B) Transfer time |
| (C) Seek time | mi m . d 1 1-1 |
| | The second secon |
| 18. Which of the following is not a techn | nique for performing I/O? |
| (A) Programmed I/O | (B) Interrupt driven I/O |
| (C) DMA | (D) Device I/O |
| ` ' | - blocks that are usually of fixed size |
| 19. A device stores information | in blocks that are usually of fixed size. |
| (A) Fixed oriented | (B) Block oriented |
| (C) Stream oriented | (D) Variable oriented |
| 65, 67. Consider FCFS scheduling, | for I/O to block on cylinders: 98, 183, 37, 122, 14, 124, the total number of head moments is, if the disk head |
| initially at 53. | (D) (20) |
| (A) 600 | (B) 620 |
| | (D) 640 29NF3-7/15CS302J |
| ge 2 of 4 | 29/0F3-7/15C83023 |
| | The second secon |

PART – B (5 × 4 = 20 Marks) Answer ANY FIVE Questions

- 21. List out the structural elements of a computer to execute a program.
- 22. List any five reasons to create a new process.
- 23. Define PCB. Explain the element of PCB.
- 24. Mention the requirements for mutual exclusion.
- 25. Define deadlock and explain it with an example.
- 26. Differentiate paging and segmentation with an example.
- 27. Define seek time and rotational latency.

PART – C ($5 \times 12 = 60$ Marks) Answer ALL Questions

28. a. Explain in detail about interrupt and different classes of interrupts with neat diagram.

- (OR) b. Justify how evolution of operating system differs in terms of serial, multiprogramming and time sharing system.
- 29. a. Draw a neat sketch of five state process model and explain it.

- (OR) b. How will you implement threads? Classify and describe in detail.
- 30. a. Define semaphores and explain the solution in producer consumer problem using semaphores.

b. Consider the following five process with the CPU burst time given in Milliseconds

| | Process | Burst time (msc) |
|--|---------|------------------|
| | P1 | 10 |
| | P2 | 29 |
| | P3 | 3 |
| | P4 | 7 |
| | P5 | 12 |

Consider First Come First Served (FCFS) and Round Robin (RR) (quantum = 3 ms) scheduling algorithm. Illustrate the scheduling using Gannt chart. Which algorithm will give the minimum average waiting time?

31. a. List out the memory partitioning techniques and explain in detail.

(OR)

b. Explain how memory management is done in windows.
